The ultimate efficiency tool for your workshops! These trolleys allow your Technicians to have everything they need for a service right at their finger tips.

STEINERTM

Steiner Express Service Trolley

Main Structure

The trolley is manufactured from High grade Mild Steel to ensure durability and longevity. With a solid welded frame, it is constructed to allow for simple maintenance of each component. Includes 2 ergonomic grip handles for easy movement.

Lifting Mechanism

The trolley has a smooth lifting mechanism thanks to quality cylinders and bearings. The strong support frame ensures very little movement of swaying when lifting or lowering a wheel. The flathead control buttons reduce risks of an accident occurring.

Instruments and Parts Placement

The Cabin is designed with 3 trays, with the bottom 2 trays having a lip to prevent equipment from falling off. The rubber sheet lining the bottom helps reduce steel noise.

Support Bracket

Equipped with a wheel dolly which has 2 rolling castor drums to allow the wheel to be easily moved for stud placement. Also includes a heavy duty frame that the tyres can lean up against.

Additional Configuration

Self-priming spill-proof suction system for draining brake fluid. Built in waste fluid containment to hold it during the service.

SPECIFICATIONS

Length	885mm
Width	810mm
Height	1100mm
Tyre Rack Height Rises	1600mm
Maximum Lifting Load	50kg
Maximum Tyre Diameter Disassembly	790mm
Minimum Tyre Diameter Disassembly	490mm
Use Pressure	4-10kg/cm2
